

Features

- (1) Compact and High current density On-board type:
Rated current 20A with DC48V input line.
- (2) Suitable size for the PCB-mounting:
46(W) x 12.7(H) x 46(D)mm.
- (3) Matches best for use in conjunction with
Densei-Lambda's power modules for telecommunication
equipment: Meets EMI-standardized requirements with PAF
and/or PAH series used together.
- (4) Patent and design registration pending.

Safety standard

Conforms to UL1950, CSA950 and EN60950

Specifications

| Item | Model | PAN4820 |
|------|-----------------------|--|
| 1 | Rated voltage (DC) | DC76V |
| 2 | Rated current (DC) * | 20A |
| 3 | Test voltage | Terminal - FG: DC1500V, 1min. Terminal - Terminal: DC100V, 1min. |
| 4 | Isolation resistance | Terminal - Case: DC500V, 100Mohm |
| 5 | Cooling | Convection cooling or forced air cooling |
| 6 | Operating Temperature | -40 ~ +85°C (Convection Cooling) -40 ~ +100°C (1m/s ² Forced Air Cooling) |
| 7 | Operating Humidity | 30 ~ 95% RH (No Dewdrop) |
| 8 | Storage Temperature | -40 ~ +100°C |
| 9 | Storage Humidity | 10 ~ 95% RH (No Dewdrop) |
| 10 | Vibration | 10 ~55Hz Sweep for 1 min Amplitude 0.825mm(max 49.0m/s ²),X,Y,Z, 1 Hour each |
| 11 | Weight (typ.) | 45g |

NOTE

* Convection cooling Ta≤75°C Forced air cooling (1m/sec), Ta≤90°C
Refer to derating curve on the right

Derating

Attenuation characteristics

● CLASS-A Application
PAN4820+PAF500F

● CLASS-B Application
PAN4820+adding external components
(Capacitor: Net 3)+PAF500F

Connection-1. [Basic Connection]

In input/output of power modules, please connect resistor/capacitor properly as we recommend in our instruction manuals for power modules. Fuse is not included in the unit, so please install appropriate fuse in input side as guided in our instruction manual of power modules.

■ Conform to EN55011/55022, VCCI Class A

■ Conform to EN55011/55022, VCCI Class B

Recommended Values C1: 22 μ F (Ceramic Capacitor)
C2,3: 0.47 μ F (Film or Ceramic Capacitor)

Remark) Above connection conforms to each standard in our test condition by combining PAN series with our power modules (PAF500F48 series or PAH200H48 series). In some cases concerned with below mentioned or the like, PAN series will not conform to the standards. So, please be sure to measure EMI values (noise terminal voltage, noise electrolysis intensity) with actual equipment.

- Quantity of power modules connected / model structure / load condition
- Wiring method of input and output
- Surrounding circuits

Connection-2. [Other method of connection] (With baseplate and -V of power module grounded)

This noise filter will provide you with the best performance with the condition of baseplate and output (+V or -V) non-grounded. If baseplate and output (+V or -V) need to be grounded, connect C1, C2, and C3 shown in the above.

Recommended Values C1: 22 μ F (Ceramic Capacitor)
C2,3: 0.47 μ F (Film or Ceramic Capacitor)

● Class-A Application

PAN4820+PAF500F

● Class-B Application
